Plant efficient fertilizers & biostimulation products

Aminocore offers advanced organic amino acid solutions to support healthy and sustainable crop growth. Our natural amino acids deliver twice the strength of conventional alternatives, providing your plants with easily absorbable L-amino acids for improved nutrition and resilience. Trusted by farmers in leading agricultural regions, Aminocore helps enhance productivity while being safe for both crops and the environment. With our new production facility in Germany, we're ready to meet growing global demand and continue supporting your success.

How do plants acquire amino acids?

Plants can produce their own amino acids, which are essential for building proteins. However, this process uses a lot of energy. To help, plants can also absorb amino acids from the soil or through their leaves. When plants are under stress or in poor soil, making amino acids becomes harder and drains their energy, making them weaker. By giving plants extra amino acids from outside sources, they get a boost in energy and essential nutrients, helping them grow stronger and healthier without using up their own resources.

Why add amino acids to your plants?

When plants stop growing properly, problems can happen. Adding Aminocore's amino acids during the growing season can help keep your crops healthy and protect your investment.

Here are some of the key benefits:

- ✔ Help plants produce vitamins
- ✔ Support important processes in the plant
- ✔ Encourage better flowering and fruit production
- ✔ Improve the size, taste, color, and quality of fruits
- ✔ Increase the overall quality of the crop
- ✔ Make plants stronger against pests and diseases

By using Aminocore products, you give your crops the extra support they need to grow better and stay healthier.

Our products

AMINOCORE BASIC PLUS

Aminocore BASIC PLUS is a natural fertilizer containing micro-filtered amino acids that boost plant growth, vitality, and resistance. It improves plant and fruit quality, making leaves larger, roots longer, and increasing flower and fruit production.

- ✓ Suitable for any crop, especially after stress from frost, hail, or transplants
- ✓ Ideal for private label formulations
- ✓ Approved for ecological farming under EU regulations
- ✓ Complements conventional fertilizers and crop protection

[Read more >](#)

AMINOCORE COMPLEX

Aminocore COMPLEX offers the same energy-boosting benefits as Aminocore BASIC PLUS, but also contains fulvic acids and plant extracts, making it ideal for high-value crops like fruits, vegetables, and flowers. The fulvic acids improve nutrient absorption, while the plant extracts provide antioxidants, supporting stronger growth, larger leaves, healthier roots, and better fruit production.

- ✓ Best applied for extra stimulation or after stress from frost, hail, or transplants
- ✓ Approved for ecological farming under EU regulations
- ✓ Complements conventional fertilizers and crop protection products

AMINOCORE HUMICAL

Aminocore HUMICAL combines the energy benefits of Aminocore BASIC PLUS with microbial stimulation, making it ideal for growing vegetables and flowers in regions with salinity or extreme conditions. Its chelated calcium, free of nitrate and chloride, is easily absorbed by plants, strengthening cell walls, improving fruit quality, and boosting ornamental value.

- ✓ Best for extra support or after stress from frost, hail, or transplants
- ✓ Suitable for various crops, including foliar and drip irrigation
- ✓ Approved for ecological farming under EU regulations
- ✓ Complements conventional fertilizers and crop protection products

AMINOCORE AMINOTRACE

Aminocore AMINOTRACE delivers high-quality yields through biologically active amino acids and naturally chelated trace elements, which support plant growth, vitality, and resistance. This unique formula enhances energy through the Krebs cycle and prevents nutrient lock-out, ensuring effective uptake and minimizing deficiencies.

- ✓ Triple action: bio-stimulant, fertilizer, and trace element corrector.
- ✓ Contains six key trace elements (Fe, Zn, Cu, Mn, B, Mo) in ideal ratios.
- ✓ Prevents zinc deficiency in plants on acidic or calcareous soils.
- ✓ Two to three applications of 200ml/100L per season meet plant needs.

Our products

AMINOCORE AMINOCAL

Aminocore AMINOCAL combines the energy benefits of Aminocore BASIC PLUS with rapid calcium delivery to address deficiencies. It supports plant growth, vitality, and resistance, improving tissue firmness and extending shelf life. This leads to healthier crops with better color, larger leaves, and more fruit.

- ✓ Prevents issues like bitter pit, fruit cracking, and blossom-end rot
- ✓ Suitable for vegetables, fruit trees, and industrial crops
- ✓ Best applied during calcium deficiencies or for extra stimulus
- ✓ Approved for ecological farming under EU regulations

AMINOCORE AMINOBOR

Aminocore AMINOBOR offers the energy benefits of Aminocore BASIC PLUS while adding boron to correct deficiencies. It supports plant growth, vitality, and resistance, improving color, leaf size, root length, flowering, and overall crop health. Boron is crucial for sugar metabolism, cell wall formation, and hormone synthesis, and AMINOBOR provides it in a highly bioavailable form for optimal fruit set and retention.

- ✓ Ideal for vegetables and fruit trees
- ✓ Best applied foliar on sensitive crops like grapes during pre-flowering
- ✓ Complies with EU Directives and approved for ecological growing
- ✓ Complements conventional fertilizers and crop protection products

AMINOCORE AMINOFE

Aminocore AMINOFE combines the energy benefits of Aminocore BASIC PLUS with iron to correct deficiencies. It supports plant growth and vitality by providing iron in a highly available form, chelated with amino acids for rapid uptake and efficiency.

- ✓ Contains 5% iron in non-oxidized form (Fe++)
- ✓ Effective for correcting iron deficiencies in alkaline soils or for acid-loving plants
- ✓ Suitable for vegetables, fruit trees, and industrial crops
- ✓ Best applied as a foliar spray, especially on sensitive plants like grapes during pre-flowering

AMINOCORE PRO SOIL

Aminocore PRO SOIL Pellets is a solid organic fertilizer and soil improver that enhances soil nutrient content more effectively than liquid supplements. With a balanced 7-4-3 composition and customizable options, it provides a higher dose of nutrients directly to the roots.

- ✓ Apply during seeding or near plants safely
- ✓ Gradually releases nutrients over six months
- ✓ Boosts beneficial microorganisms
- ✓ Perfect for various crops, including vegetables, fruit, strawberries, grapes, and potatoes

Fertilizers and biostimulation

BASIC PLUS

Provides energy for plants

AMINOCAL

Improving the firmness of green tissues and fruits

AMINOFER

Combat iron shortage

AMINOTRACE

To enhance brix, acidity and secondary metabolites

COMPLEX

To protect against stress

AMINOBOR

To stimulate flowering/fruits

HUMICAL

Microbial stimulation

PRO SOIL

To improve the soil and microlife
